

FSA Solutions
simple things made easy

FSA Solutions

Tailored solutions for the financial industry

What is FSA Solutions?

FSA Solutions is a modern technology stack and a partnership model created to quickly solve your integration, aggregation and visualization needs.

Why does it take so much time, resource, and money to solve simple problems in your trading technology applications?

Most organizations have value and efficiency trapped in systems that are just too complex, where standard solutions don't cover **the long tail of needs**. Significant effort is required therefore to maintain these current platforms and manage their inherent complexity.

The net result is reduced competitiveness at a business level and ever-increasing frustration

felt by users and development teams alike.

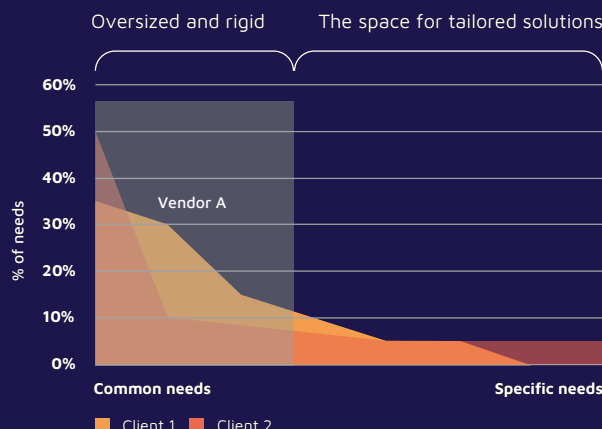

FSA Solutions can quickly deliver an intuitive web UI on top of existing and new workflows to:

- ✓ Augment and integrate with existing systems
- ✓ Make building new systems from scratch easy

FSA Solutions gives you the ability to rapidly reshape your systems and adapt them to your real needs

The long tail of needs

Off-the-shelf offerings tend to cater for most common needs and ignore the long tail of specific requirements

The void left by rigid solutions has efficiency costs and compliance implications

Need to add new functionality and extract information from your old systems?

Navigate and automate, fast

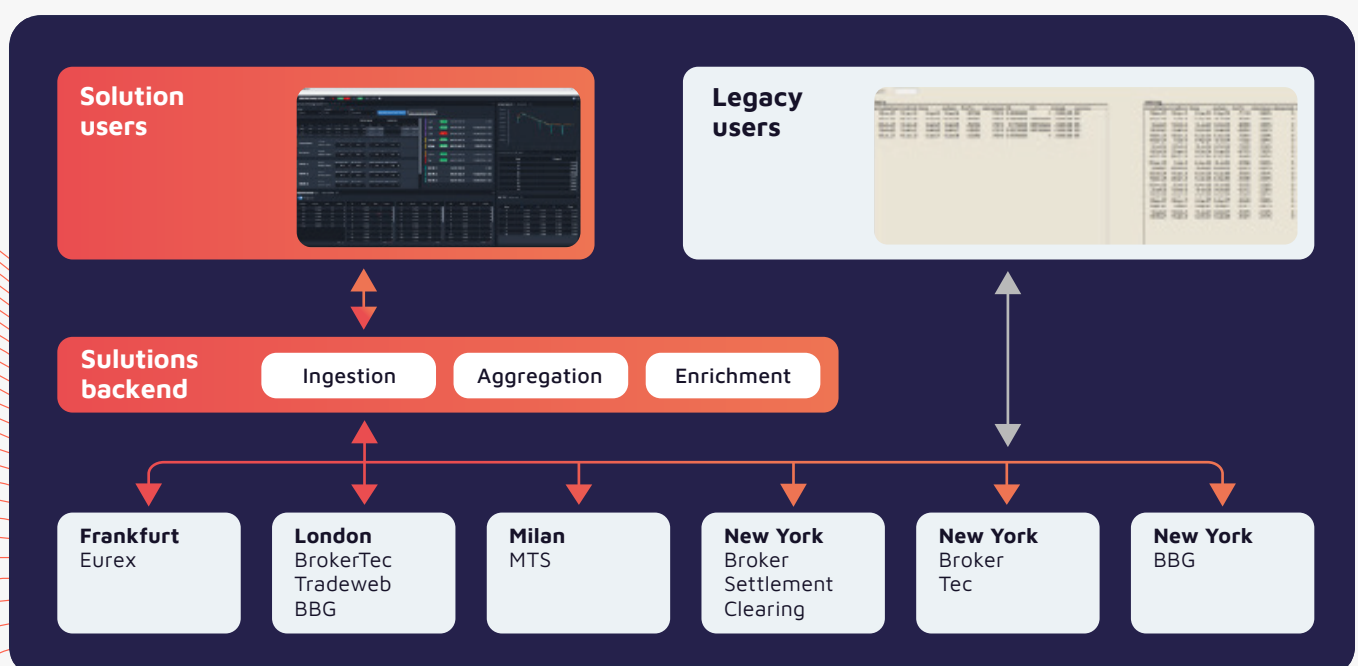

Cells everywhere, no way out

Excel is the most prevalent application in financial services thanks to its availability and ease of use, but in today's highly volatile and regulated environment this brings a number of risks especially when:

- ✓ Data feeds break
- ✓ Input errors are made
- ✓ Changes need to be rolled out across an entire team
- ✓ New compliance, monitoring or audit mandates are introduced

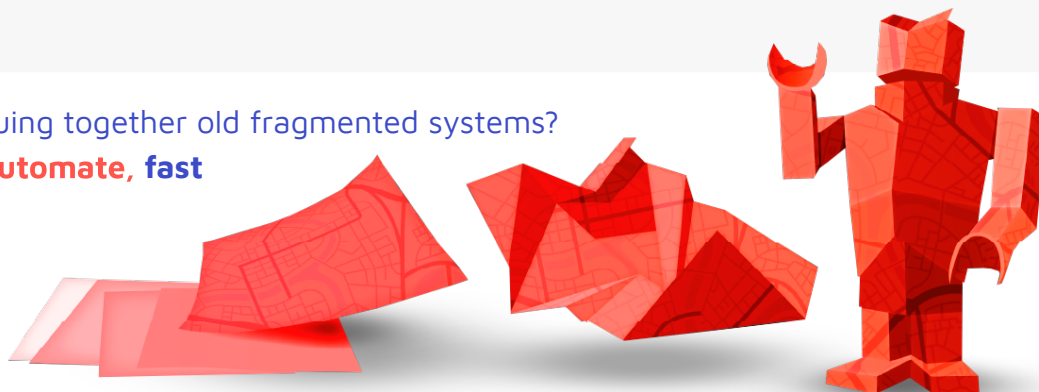

FSA Solutions integrates and enriches existing data sources by connecting to internal and external systems and creating a clean data repository that updates in real time.

FSA Solutions gets rid of non-auditable spreadsheets, gives teams a web user interface to access and navigate data and provides administrators a centralized solution for access, control and monitoring.

Still manually gluing together old fragmented systems?

Navigate and automate, fast

Too many GUIs, too little time

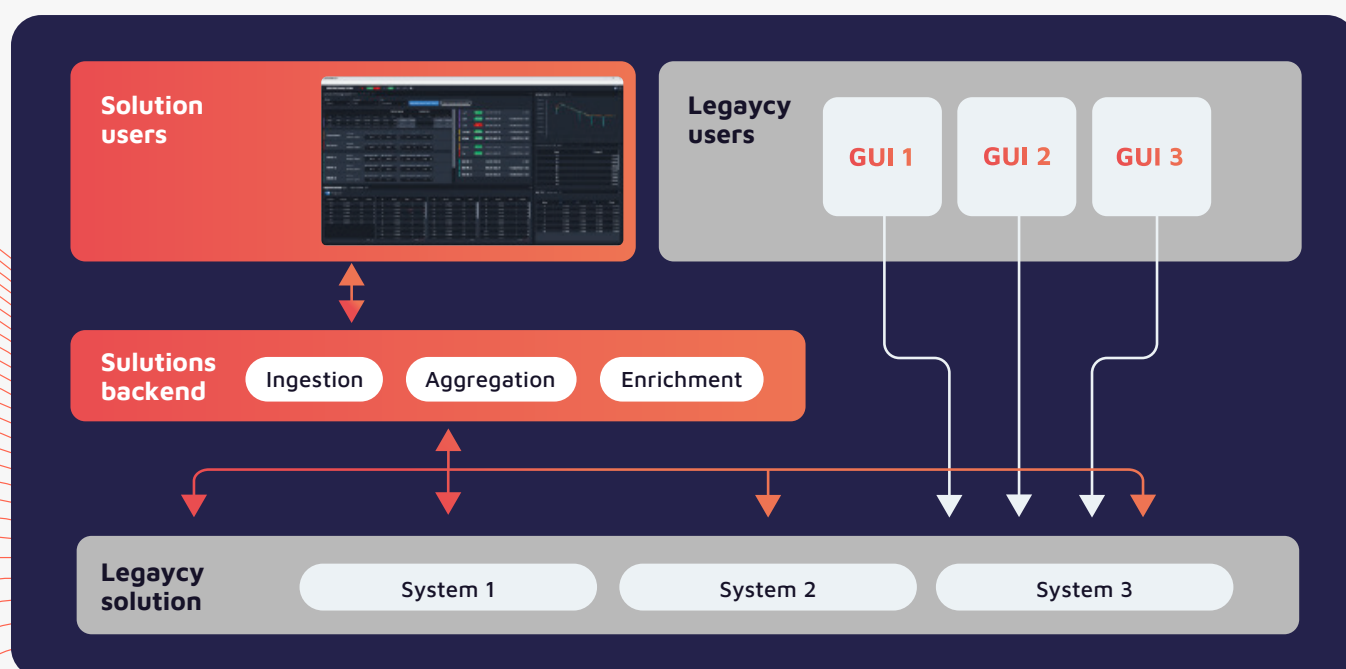

If your current trading systems are flexible, your current technology vendor is regularly shipping updates and your development teams have plenty of time to evolve them, then you are in the minority.

You are also in the minority if your vendor accommodates your requests at a reasonable cost in time and money.

The majority of market participants regularly cite these as the three major challenges that they face on an on-going basis.

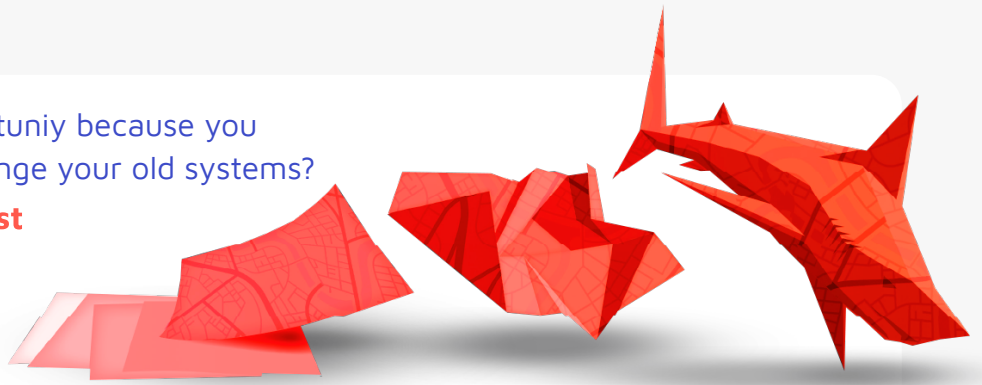

FSA Solutions resolves these problems with a range of “plug and play” modules that can instantly augment and improve your existing trading infrastructure. **Our HTML5 user interface is being used to replace multiple instances of the same legacy user interface on one desktop, streamlining the end-user journey.**

This is achieved through a single integration layer that wraps around different legacy systems giving alternative access to the underlying data and functionality. This single connection point means that users and applications can access all the relevant data they need irrespective of its source.

Concerned to miss an opportunity because you won't be fast enough to change your old systems?

Navigate and automate, fast

There's a lite at the end of the tunnel

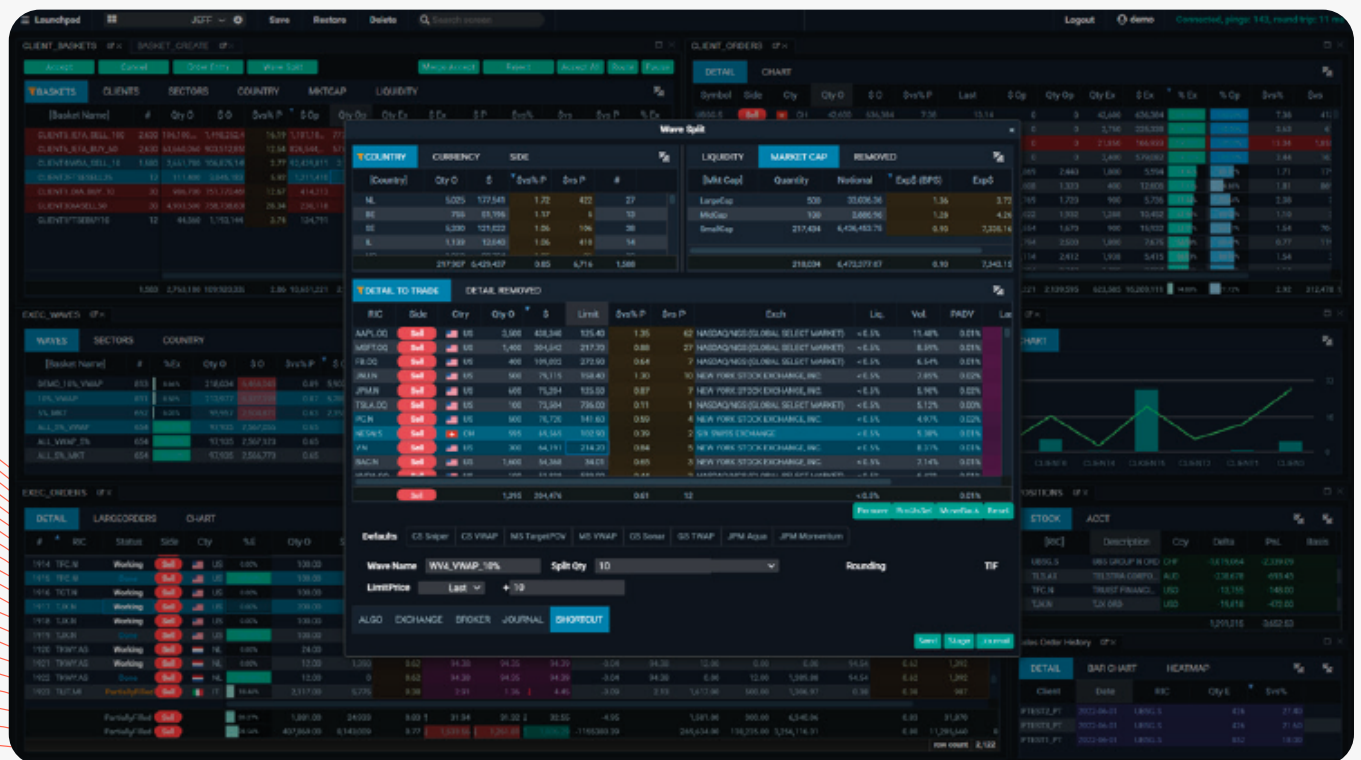

Why buy a functionally rich OMS when all you need is a simple client deal capture or order entry system?

Often firms struggle to buy solutions that can meet their exact requirements. A platform that is too complicated and unwieldy is just as bad as one that isn't functionally rich enough. Today,

firms need the ability to match platform costs and operating footprint to their exact needs.

Our Lite range of systems are designed to streamline exactly to your trading workflows, with an architecture that is tuned to need only the resources that are necessary for that.

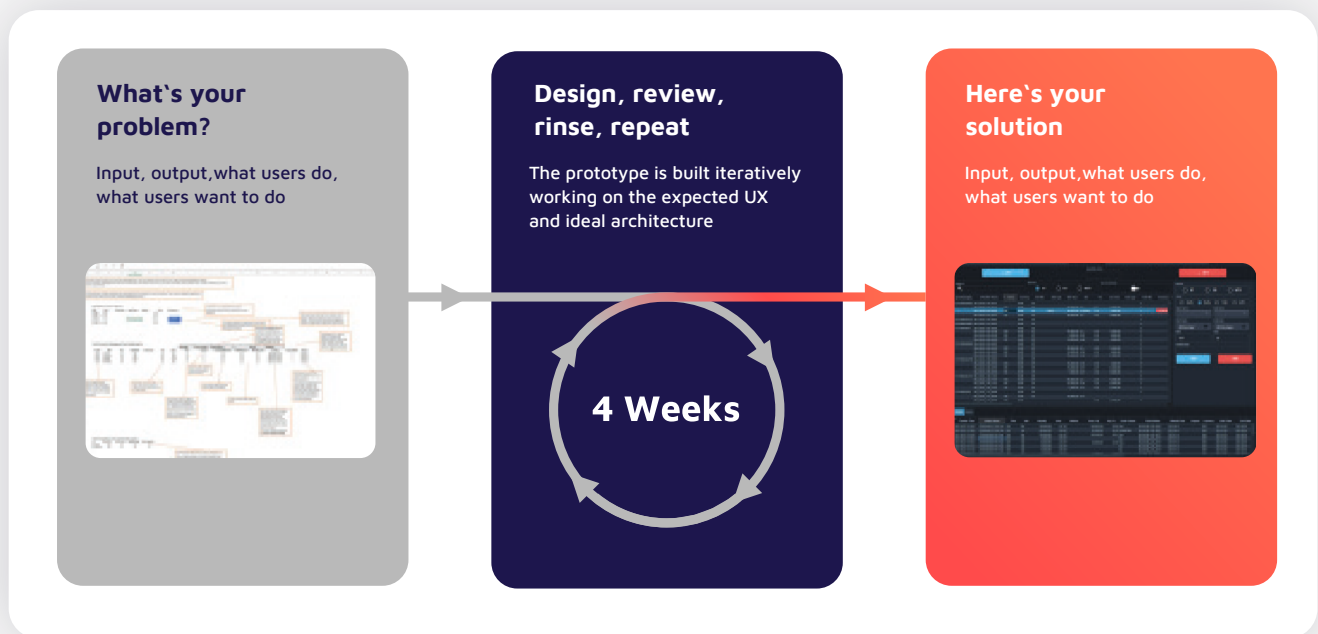

The screenshot above shows FSA Solutions's OMS lite, a modular order management system for equities.

Meet Solutions

One of the main reasons software projects take longer than expected is the misalignment between expectations set during the analysis phase and the reality that is shipped afterward.

The analysis phase of FSA Solutions' projects includes joint design between us and our client, producing the appropriate documentation as well as a working prototype that is used to ensure full alignment on what the final project delivers.
